

# Poultry Energy Efficiency Checklist

## *Layers or Breeders*

You can use this form to determine if there are potential energy savings for your farm that could be captured in an energy audit. If you have one or more item(s) that can be answered “yes”, an energy audit may be needed for your farm. Once you have filled out this form appropriately, you should discuss the results with an MU Extension Natural Resource Engineering Specialist located near your farm (contact information is listed below). This form has been adapted for use from the MAESTRO (Missouri Agricultural Energy Savings Team - A Revolutionary Opportunity) Program and was originally developed by EnSave.

- Does your egg storage room have less than 6 inches of batt or loose fill insulation?  
Or less than 1.5 inches of foam insulation at the ceiling?
- Do you have an uninsulated egg storage room?
- Are you interested in upgrading your egg storage room heating and cooling system?
- Are your ventilation fans older than 10 years?
- Do you use incandescent lighting?

YES	NO

**NOTE: If you have a contract with poultry company, it is important to contact the company prior to making any changes to poultry facility.**
