Let’s Read About Healthy Eating
Pre-kindergarten nutrition education newsletter  Lesson 10

To tell the tooth!

- Almost all foods can cause cavities if teeth are not brushed and flossed regularly!
- Chewy, sticky, high-sugar foods are the worst offenders.
- How many times a day and how long the food stays in our mouths is just as important. If your child sips on high-sugar drinks like soda pop for long periods of time, this can cause cavities.
- Foods that promote good dental health: fresh fruits and vegetables, plain yogurt, cheese, milk and popcorn.
- Foods that promote cavities: candy and sugary drinks.

**Practice flossing**
To help your child learn the skill of flossing teeth, try this:

**You will need:**
An egg carton and white yarn or string

**Here’s what to do:**
Turn the egg carton upside down to act as teeth. Show your child how to floss by wrapping the yarn around your fingers and flossing the egg carton (teeth). Have your child give it a try.

**Cavity keep away**
To help your child understand how important it is to brush and floss daily, try this:

**You will need:**
An apple, knife and paper bag

**Here’s what to do:**
Two days ahead of time, make a 1-inch deep hole in the apple. Put it in the paper bag and set it aside to darken. Then, cut a hole in the bag so your child can see the “cavity.” Tell them this is how a tooth with a cavity looks. Brushing and flossing helps prevent cavities.

Children can learn about healthy eating and being more active from reading books. Want to find more books to read with your child? Go to www.michigan.gov/documents/mde/Lm_2010_Mahoney_Chidrens_booklist_332683_7.pdf

Recipes

Kids in the Kitchen

Get your child involved in making this recipe by spreading the peanut butter on the apple slices.

Happy Apple Smiles

You slice the apple – your child can do the rest!

Ingredients:
• Apple (2 slices for each person)
• Peanut butter
• Miniature marshmallows (5 for each person)

Directions:
1. Wash hands and surfaces.
2. Wash the apple(s), cut into 8 slices and remove the core. Give each person 2 slices.
3. Show your child how to spread peanut butter on one side of each apple slice. Put marshmallows on one apple slice. Put the other slice on top.
4. Hold up your Happy Apple Smile and smile back.

After you have eaten the Happy Apple Smile, ask your child what we need to do after eating a snack (especially one with a sticky, sweet food like marshmallows). Then, brush your teeth together.
