**Enchiladas**

Servings: 6

**Ingredients:**
- 12 (6-inch) whole-wheat tortillas
- 1 can (16-ounce) fat-free refried beans
- 2 cups cooked rice, brown or white
- 1 can (15-ounce) diced tomatoes with chiles
- 1 cup shredded reduced fat cheddar cheese, divided
- 1 can (16-ounce) enchilada sauce, divided
- Optional: 1 can (2 ¼ ounces) sliced olives, drained

**Directions:**
1. Wash hands and surfaces.
2. Arrange the tortillas in 2 stacks and place in a cold oven. Heat the oven to 400°F. Remove the tortillas after 10 minutes and cover with a warm, damp towel.
3. Mash the refried beans in a medium bowl with a fork. Add the rice, ⅓ cup cheese, tomatoes and olives (if desired).
4. Coat the bottom of a 9-by-13-inch baking dish with a thin layer of enchilada sauce. Save about half the sauce to use as a topping.
5. Spoon about ⅓ cup rice mixture over the center of a tortilla; roll it up. Set in the baking dish seam-side down. Fill the remaining tortillas and place them in the baking dish, squeezing them into place.
6. Pour the remaining enchilada sauce over the rolled tortillas and sprinkle remaining cheese over the top.
7. Bake, uncovered for 30 to 35 minutes until hot and bubbly. Let stand a few minutes before serving.
8. Refrigerate leftovers immediately.

**Additional cooking tips**

- Sugar substitution: 1 cup sugar = 1 ⅓ cups brown sugar or 1 ½ cups powdered sugar
- Can use prepared bouillon cubes instead of canned chicken broth.
- If substituting fresh herbs with dried herbs, use ⅓ of what the recipe asks because dried herbs are more potent. Conversely, if a recipe calls for dried and you would like to use fresh, triple the amount called for in the recipe.

Substitute fresh or frozen chicken for canned chicken by using the preparation instructions below:

• Wash hands before and after handling poultry.
• Completely thaw poultry before cooking so that it cooks more evenly. Defrost in the refrigerator, in cold water or in the microwave. Never defrost food at room temperature. Food thawed in cold water or in the microwave should be cooked immediately.
• Cook poultry until it reaches a safe internal temperature of 165°F. Use a food thermometer. You can't tell it is cooked by looking!
• Never place cooked food on a plate that previously held raw poultry or other types of meat.
• Rinsing poultry under water is not a safety step. Cooking to a safe internal temperature of 165°F is what will kill pathogens that could cause illness.
• Let the chicken cool, and shred before adding to recipes.
