PREGNANCY TESTING SAVES YOU MONEY

ONE OPEN COW COSTS THE AVERAGE BEEF PRODUCER OVER \$400 ANNUALLY!!!

Schedule Dr. during first trimester.

Best time to vaccinate, deworm and work calves with cows.

Allows veterinarian to evaluate cows with poor body condition, bad feet, and reproductive organ problems; and take overall evaluation of herd.

BULL SOUNDNESS EVALUATIONS

JUST BECAUSE A BULL WAS GOOD LAST YEAR, DOESN'T MEAN HE WILL BE GOOD THIS YEAR. Performed annually.

Bulls are evaluated for overall soundness, not just semen quality.

Opportunity to cull bulls with penile warts & defects, inadequate testicles, & other problems that would otherwise go undetected.

TRICHOMONIASIS TESTING

BECOMING MORE PREVALENT IN SOUTHERN MISSOURI. CASES ARE DIAGNOSED IN OUR AREA.

Required for sale of all non-virgin bulls.

If herd is infected, can be financially devastating.

Consider a consultation with one of our veterinarians to aid in forming a more specific herd health plan for your livestock.
