

SOUTHEAST MISSOURI SPRING CALVING
SHOW-ME-SELECT HEIFER SALE

Dec. 4, 2010 at 1:00 p.m.

Inspection after 8:00 a.m. Sale day

Fruitland Livestock Auction, Fruitland, MO.

Exit 105 off Interstate 55 - 3 miles north on Highway 61

Approximately 120 Bred Heifers available - 99% Black and BWF - Some registered Angus.

Mostly Angus cross with some Angus Simmental.

- 55% A.I. bred with 20 Tier 2
- Sorted into uniform lots of breed, color, size and calving date.
- All heifers calfhood vaccinated.
- Heifers will have health papers to go to any state.
- Heifers have met minimum standards for reproductive soundness, pelvic size, body condition and weight and are free of blemishes.
- Bred heifers are due to calve from January 25 to April 25, 2011.

Sponsored by: Show Me Select Board with University of Missouri Extension, Commercial Agriculture Program, College of Veterinary Medicine, Mo. Missouri Cattlemen's Assoc. and Mo Dept. of Agriculture.

November 4, 2010

TO: Prospective Buyers and Guests:

Welcome to the twelfth Southeast Missouri Show-Me-Select Spring Calving Replacement Heifer Sale. The past eight sales have averaged \$1366 on 1655 heifers. Last May's Sale averaged \$1413 on 65 heifers. The preg checks were started in late June and the open heifers from some of these herds were placed on feed and have already gone to market as finished cattle. They have averaged right at \$1250 at U.S. Premium Beef so that makes a bred heifer valuable.

The 120 heifers in this sale were started from 765 heifers that we have individually sifted and sorted. The breeding work is already done and some will start calving in 2 months. Guaranteed bred heifers, and not having to feed and take care of the heifer that did not breed is worth about \$250 - \$430 per heifer to you. Remember, those heifers are guaranteed bred for 30 days after you buy them. Contact the consignor before 30 days if you suspect one is open.

The genetics on most of these heifers is excellent with 6-7 generations of stacked pedigrees in several of the herds. Also some have been sending cattle to U.S. Premium Beef for processing and have carcass data on steer mates to the heifers. If you as a producer are wanting to develop a herd, 20 years of selections are already done on some of the consignments.

There are 91 black, 28 BWF, 1 gray heifer in the sale. There are 11 Registered Angus and 20 Tier 2 Heifers in the sale. 55% are A.I. bred.

There are four regions of the State in this sale. We have our top herds back, but also Crooks Farms from near Kansas City, Charlie Rymer from West Plains and Rick Vehige from north of St. Louis who are top selling farms in their regional sales are bring consignments to our Southeast Region Sale.

Consignors are listed in alphabetical order so the sale order will be different. The catalog has footnotes for your use. I have also included accuracy on the EPD's and also Carcass and Scrotal EPD's on AI sires. Remember, the higher the accuracy towards .90 of above the more reliable the data is in selection.

Thanks for attending the Sale, or just studying the catalog. If you have questions feel free to call me 573-243-3581, look at our website: semobeef.com, or call the consignor at the number listed.

Sincerely,

Roger Eakins
Livestock Specialist

General Information
Auctioneer - Ken Carney
Sale Agent - Fruitland Livestock Auction, Inc.

The sale order was determined by consignors drawing for a position in the rotation. Each consignor selected those heifers to sell in each rotation. Heifers will be sold in uniform lots sorted according to breed type, size and those selling together are expected to calve in a 45 day period. Heifers become the property of the purchaser immediately after the sale. Each animal will be at the purchaser's risk as soon as sold. The seller will aid in the loading of the cattle on instructions from the buyer, but at the buyer's risk. No cattle will be loaded until the conclusion of the sale. All fees will be collected by the Fruitland Livestock Auction, Inc. and are to be settled before loading.

GUARANTEE

All heifers are guaranteed bred and are guaranteed to remain pregnant for 30 days after the sale. Due dates are approximate. Females can range two weeks or more around due date even if they were AI bred. Heifers were pasture exposed to bulls after A.I.. Rectal Palpation for pregnancy is subjective and not exact because all cows vary in fetal development. A.I. pregnancies are not guaranteed but highly probable. Gestation length is based on average of 283 and can come very early or very late. Any heifer found open (by an accredited veterinarian) will be returned to the consignor and the money will be refunded by the consignor. Heifers are guaranteed against genetic defects on first calf only if inspected and documented by a veterinarian. All guarantees are made by the consignor of the cattle, not the sale committee or the SEMO Cattlemen's Association.

TAGS

All heifers in the sale are identified by a special tag that carries the "Show-Me-Select" trademark and name. This tag indicates that the heifers have met all of the requirements of the Missouri "Show-Me-Select" program.

CONTRIBUTORS

The sale committee and consignors wish to thank all those who have contributed to the success of this program. Your faith in our ability to make this program work is appreciated.

****NOTICE TO BUYERS****

All heifers in this sale have been Brucellosis calfhood vaccinated between 4 and 12 months of age. All heifers in this sale have been vaccinated for Lepto at final pregnancy check. Necessary Health Paper to go to any state will be available on all heifers after this sale.

Requirements for Heifers in the December 2010 Replacement Heifer Sale

These requirements are designed to minimize the incidence and severity of calving difficulty and protect against potential reproductive losses. Heifers must be bred to service sires at or less than established birth weight EPD maximums, have a minimum pelvic area of 150 cm² prebreeding or 180 cm² at pregnancy examination, be a minimum body condition score of 5 on sale day, and meet established health guidelines.

Bred Heifers were managed under the following calendar:

Fall 2009:

- All heifers must be calfhood vaccinated for Brucellosis.
- Heifers are vaccinated for IBR, PI-3, BVD, BRSV, and 7-way Colstridial. Label directions concerning initial vaccination and boosters must be followed.
- Use of implants is discouraged. If heifers are implanted, only FDA approved products for replacement heifers are allowed according to label guidelines.
- Long-term use of MGA is prohibited. Use of MGA for periods up to 14 days to synchronize estrus is permitted.
- Internal and external parasites are controlled as needed.
- Heifers must be polled or de-horned and completely healed by sale day.

Spring 2010:

- Pre-breeding reproductive examination is performed.
 - Reproductive tract scored, pelvic measured, weighed
- Heifers are vaccinated for IBR, BVD, Leptospirosis, and Vibriosis between 60 and 30 days prior to beginning of breeding. All vaccinations must follow label directions.
- Internal and external parasites are controlled as needed.

Summer 2010:

- Heifers are pregnancy examined to determine breeding dates. (Confirm AI pregnancy or natural service.)
- Heifers are treated for external and internal parasites within 30 days of sale date. Products for internal parasite control must have a label claim for all stages of the parasite life cycle.
- Heifers are examined on sale day by a final screening committee to eliminate blemishes (scarred eyes, frozen ears, short tails, rat tails).
- Heifers must be a minimum body condition score of 5 (1-9 scale) on sale day.
- Heifers have a final pregnancy check within 30 days of Sale.

Heifers must be bred to bulls with birth weight EPDs not greater than the guidelines for the following breeds based on the current genetic evaluation at the time of breeding for the respective breed associations:

Angus	7*	Gelbvieh	109*	Red Poll	0.0
Beefmaster	-0.2	Limousin	12*	Salers	0.9*
Brangus	+1.1	Maine Anjou	+0.6	Shorthorn	2.16*
Braunvieh	-2.1	Polled/Horned Hereford	1.7*	Simmental	10.1*
Charolais	7.9*	Red Angus	9*	SimAngus	-1.2

*Calving Ease EPD - All others Birthweight

All sires used in conjunction with artificial insemination must have a minimum accuracy value of 0.6 on a scale of zero to one for the respective EPD's.

Replacement Bred Heifer Sale
Dec 4, 2010 at 1:00 p.m.**

=====

8 Black Heifers: 4 A.I. bred, due 2/17/11
4 Natural bred, due 3/10/11

**BESAND & PECAUT
3258 Hwy B
Perryville, MO. 63775
573-547-8897**

We only have 8 heifers available for sale this year, all farm raised. All eight heifers are from cows that went through the Show Me Select program as heifers. Two heifers are from sons of S A F 598 Bando 5175, and 2 from a son of Hyline Right Time and 1 heifer from a son of B/R New Frontier, All of our bulls are from Butch Meier (Butch's Angus) and Orville Birk.

We also have one heifer from an AI bull, GAR Cimarron, that qualifies for Tier 2. She is natural bred to a son of SAF Connection from Butch Meier.

We are selling 4 heifers that are AI bred to ALC Big Eye D09N a son of C A Future Direction 5321 from Select Sires, +100 YW, top 1% RE and top 1% for \$B at 68.04

Four heifers are bull bred to a son of S A F Connection from Butch Meier.

We want to keep the rest of our heifers, they make good cows!

All heifers that are called A.I. bred were pregnancy checked safe to the A.I. date, but are pasture exposed to the natural service sire.

Five of these heifers are natural sired by two bulls here at the farm; a son out of War Hall of Fame 8023 or a son out of Rito 6I6 of 4B20 6807. The remaining ten of these heifers are out of sons mentioned before and herd bulls used in the past on the farm that were purchased by our breeding stock customers. These heifers were purchased back from these folks and developed here at the farm. Heifers (all cattle here) are tested and have all checked negative for BVD PI.

Our business plans call for us to try and buy back the calves, both heifers and steers from our customers as we get along real well with their calves, both as developed heifers and fat cattle. The twenty (20) steer/heifer mates to these heifers were marketed through USPB and graded: 20% Prime, 70% Choice, 10% Select, and 40% went CAB. Yield grades were 0% YG1, 50% YG2 and 50% YG3.

I am selling 1 outstanding heifer in this offering. She is sired by Sydgen Corona 2016 a top carcass bull who is siring some of the best females I have ever had. This heifer is A.I. bred to SAF Connection. This heifer is out of an outstanding cow that has an average weaning ratios 109 and average yearling ratio of 103 on all of her calves. This heifer has been freeze branded and ultra sound pregnancy checked.

Six heifers are Registered Black Angus heifers. Two are commercial Black Angus heifers. All have been A.I.'d and then pasture exposed to a natural service Itasca son.

Two daughters of 94B (a Destination son) and one daughter of an Image Maker son, all preg checked AI bred to Connection; due to calve January 31, 2011. Two registered daughters and one commercial daughter of 5269R (a son of a 323 son out of Sydenstricker's 5084 cow and a New Design 878 daughter out of a Fullback cow), preg checked bull bred to SydGen Itasca 8081; due to calve after March 7, 2011 (early to mid March 2011)

One daughter of Connection, preg checked AI bred to Big Eye; due to calve January 31, 2011. One commercial daughter of Solution, preg checked AI bred to Bextor; due to calve January 31, 2011.

Two of these heifers have AI sires themselves. On the dams' side one heifer has five generations of AI sires, one has six generations of AI sires, four have seven generations of AI sires, one has eight generations of AI sires and one has nine generations of AI sires in their pedigrees.

The A.I. bred heifers were bred to GAR New Design 5050 on May 8, 2010. GAR New Design 5050 is an outstanding calving ease sire (+9 CED). He is one of the most complete performance bulls in the Angus breed. He is known as one of the breed leaders for calm disposition.

The natural bred heifer was bred to Circle A Power One 7312; he resides on our farm. His individual CED is +9.

Two of these heifers have met the requirements for the classification Tier II Show Me Select.

All of these heifers were born and raised on the farm with known birthdates, dams and sires. Ninety-six percent of the most recent cattle fed from the herd graded choice with seventy-six percent receiving above choice with no yield grade fours.

A brochure containing detailed information on these heifers and sires will be available on the day of the sale.

All heifers that are called A.I. bred were pregnancy checked safe to the A.I. date, but are pasture exposed to the natural service sire.
