

## 2017 Community Conversations Report: Statewide Synthesis

In late 2016 and early 2017, University of Missouri Extension gathered input from Missouri stakeholders on key challenges facing their communities. Facilitated Community Conversations employed the World Café process. These were held across the state—26 with approximately 600 external Missouri stakeholders, 8 with approximately 500 Extension regional faculty and staff, and 4 with approximately 100 university faculty and staff from MU and Lincoln University. External stakeholders included representatives from: Extension councils; local, regional, and state government; business and industry; education; faith-based, social service, civic and community non-profit organizations; family- and youth-serving organizations; farm, agriculture, natural resources and environmental organizations; and key population groups. Four of the external conversations were conducted in Spanish to engage Latinos from key population areas of the state.

From the reports submitted outlining the results of each conversation, a list of 158 unique issues was compiled. This list was then coded for themes using qualitative methods, and the issues were organized under the resulting themes and subthemes. Definitions for each category were developed from the words participants used to define the issues in their communities. In the report below, issues, as written by participants, are listed beneath appropriate themes and subthemes. Themes are organized alphabetically. Subthemes are listed beneath their respective themes in descending order by frequency, on the basis of external Missouri stakeholder Community Conversations frequencies within a particular theme. Note that many issues fall in more than one category.
