Ronnie Veith, Purdy

589 lbs.

P/L -\$18.39

ADG 3.33 lbs

Angus & Hereford

Medium & Large 1's

Bailey - "The type we send up north, but could go anywhere. They'll get big."

Skyler - "Good clean hair, probably a little too full to get the top dollar. Best part is they have a healthy look which makes them easy to sell."

Tawnie- "There are a few that don't look quite as mature as the others. They have fleshing ability. Should be easy feeding and a practical set of calves."

The top two total profit steers were from Ronnie's group. Eight of 10 steers out of 60 total received carcass premiums. Both top profit steers were sired by the same bull, who unfortunately was injured and later euthanized. Four of 6 carcasses out of the Journey 7120 of GAR sire graded Prime minus or better. In the last four feedout, Ronnie has placed either first or second on most profitable or lost the least money.

Schallert Bros., Purdy - #2

725 lbs.

P/L - \$86.51

ADG 3.31 lbs.

Angus sired

Large 1's & 2's

Bailey - "They're more even than their others. They're all black, that's a plus."

Skyler - "They're good enough to go about ANYWHERE. There's one that's a little staggy that we might have to sort off for some buyers. Like Bailey said they'll go right to the bunk and eat and be healthy. That's the most important part."

Tawnie - "There's more difference to these guys than what first meets the eye. Some show more Continental blood, some are more English looking. A couple will probably hit the Choice target, but as a group, yield probably won't be the greatest"

Schallert's inquired about putting an assortment of their purchased calves in for comparison purposes. This 5 head were all black. Two graded Prime minus and one was Choice plus on premiums. No retail value (DOA) per day of age available as birth dates were not known. These 5 steers were the only group that did not have any individual treatment. They likely were the longest weaned of the 60 head.

Goodnight Angus, Carthage
752 lbs. P/L -\$120.90 ADG 3.26 lbs.
Purebred Angus Large 1's

Skyler - "They have a good disposition. They show a lot of body and muscle. Too much fill. They'd make a nice package for our farmer/feeder buyers. They're calm and those guys are picky and don't like crazy ones. They like healthy ones too."

Tawnie - "Very nice steers. One of the things I really appreciate about them is the foot structure and hindquarters they have. They're sound and well muscled."

Bailey - They're big boned and have a lot of stretch. They'll be big when they're finished."

Consistently, since 2010 the Goodnight steers get Yield Grade premiums along with CAB and Prime minus. Two steers ranked in the top 10 for Retail Value Days on Feed. One steer had a 4.02 ADG. The Angus sire was GAR Method on 3 head.

Calvin Hudson, Middletown

668 lbs.

P/L - \$134.92

ADG 3.32 lbs.

Angus and SimAngus

Large & Medium 1's & 2's

**No Fall Pictures
No Buyer Comments
Loaded at Paris, MO**

A strong carcass entry with a Yield Grade 1 and 5 Choice with 4 CABs. The top group in Retail Value per Day of Age at \$3.56. Five head were sired by the Angus, TCCC Royalty 55.

Jack Sharkey, Taylor

747 lbs.

P/L -\$165.54

ADG 3.45 lbs.

Angus and Polled Hereford Large & Medium 1's & 2's

**No Fall Pictures
No Buyer Comments
Loaded at Paris, MO**

Long-time feedout participant starting in 2002. His steers were the top-gaining entry this time at 3.45 lbs. and second high in Retail Value per day of Age with two in the top 10 in that category. The Polled Hereford sire was RTW Berlot 1015 ET. There were three different Angus bulls. All 8 steers had a 1 disposition score, these calves were very docile.

Kunkel Farms, Neosho

585 lbs.

P/L -\$201.54

ADG 3.30 lbs.

Pure Red Angus except 2 crosses

Large 1's

Tawnie - "Very uniform for the age spread represented. They're the easy feeding type. I think they'll be productive as far as yield is concerned but I'd like to see a bit more muscle expression."

Skyler - "The feedlots are hard on lighter calves like these. We would be more apt to send these to grass or a grow yard to put cheap gain on them, then to a feedlot."

Bailey - "I agree with Skyler they need more growth. They have good hair and are heavy boned."

Long-time Red Angus feedout participant starting in 2007 with one steer this year with a 3rd in RV/DOF and 5th in RV/DOA. He also was the top daily gainer at 4.26 lbs. His sire was Pie El Grande 7508. Six different Red Angus bulls had steers in this group.

Duane Walker, Neosho

691 lbs.

PL -\$210.43

ADG 3.21

Hereford sired Brangus dams

Large 1's & 2's

Tawnie - "They're big footed and big boned. They'll be big when finished. I'd like to see a bit more dimension to them but they're nice structurally. They show the attributes of heterosis. I'm not sure they'll be truly finished by the slaughter date for this program."

Bailey - "They're the Nebraska type. They chase carcass yield out there and they kill them BIG! I think they're quite possibly the best yield grade performers of the night."

Skyler - "Nice yearlings. #62 is a bit leggy and shows more "ear" than the rest. That's a little tough to send to some of our farmer feeders in the north country."

All were killed in June. One steer did pick up a \$15 premium for making CAB. Two carcasses received YG 2 premiums; Steer #127 was the 6th high on RV/DOA and was CAB.

Gerald Eggerman, South Greenfield
546 lbs. P/L -\$221.40 ADG 3.09 lbs.
Angus-Sired Large & Medium 1's

Skyler - "Nice calves but a little full. Probably should see a grow yard or wheat pasture before hitting the feedlot. One has a frosted ear that would take a hit if he got sorted to where a buyer could see it."

Bailey - "They won't finish quite as heavy and it will take them longer to get there."

Tawnie - "They definitely look like calves from first calvers, they have some ground to make up to get finished. They have that easy feeding, "soft centered" look to them. Soft centered refers to cattle that have some depth of body and look easy doing like they're easy keepers."

Another long-timer beginning in 2005 that had the misfortune of one steer death. In spite of that 4 of the remaining 5 made CAB premiums. The Select plus steer was a 1 Yield Grade so he even received a nice \$6.50 premium. That totaled \$13.40 add-ons for carcass premiums on his entry. Their 6.67 lbs. of feed per pound of gain was tops among the 9 groups. The Angus sire was DHT 956 Bronc King EZ 262.

Schallert Bros., Purdy - #1

768 lbs.

P/L -\$353.57

ADG 2.72 lbs.

Angus, Charolais, Hereford sires Medium & Large 1's & one 2

Skyler - "We own a lot of cattle just like them. They're the corporate yard type. They're long weaned and will go right to work in the feed yard. I don't think they'll be super gainers but they'll make money in that environment. They'll work for the corporate guys."

Bailey - "They have more age to them than the others we've seen, that's a big factor in staying healthy. They'll go right to the bunk, stick their heads down and eat."

Tawnie - "There's a lot of difference represented there, breed makeup, body type, etc. I think we'll see a lot of spread in how they perform on the rail both YG and QG. They'll finish sooner than most of these."

11/03/2020 19:

This selection included a black baldy, 2 solid reds, a smokey and a red whiteface. We could call these, "a south Missouri commodity group." As with the other Schallert group, no birth dates were available so, no \$RV/DOA.

How Would Your Feeder Cattle Compare?

Feedout Comparison – 2020-21

Owner	Sire		ADG	% Low	% Yield			*\$	Per Head
Code	Breed	No.	lbs.	Choice	Grade	%	F/G	RV/	Profit or
				& Better	1 & 2	Outs	lbs.	DOA	Loss \$

	Total/Average	61(60)	3.25	80%	30%	11%	7.31	\$3.29	-\$158.26

() Number that carcass data was obtained on.

An industry target used for 10 or more years is 70-70-0. This means 70% of a group should grade Low Choice or better, 70% should be 1 and 2 Yield Grades and 0% should be outs or outliers. Outs are heavily discounted due to Yield Grades 4's and 5's, Standard Quality Grade, dark cutters, carcass weights under 550 lbs. or over 1050 lbs. Other stiff discounts may include age over 30 months, dairy conformation and dark cutters.

*RV/DOA = Retail Value Per Days of Age - B & I had no birthdates

As premium Choice and Prime grade premiums increase, concern over 4 Yield Grade cattle has lessened if the quality grade premiums more than compensate for the discount.
